SUMMARY

Software Engineering undergraduate with hands-on experience in DevOps, Cloud, and Full-Stack development. Skilled in CI/CD automation, containerization, Kubernetes, and AWS/Azure cloud services. Actively building production-grade DevOps pipelines and cloud-native systems. Seeking entry-level DevOps, Cloud Engineering, Platform Engineering, or DevSecOps opportunities to contribute technical expertise while continuing to grow in cloud-native and automation.

EXPERIENCE

DevOps Engineer – Intern

VinaSai Inc

March 2026 – Present

Toronto, Canada

- Improved recovery by automating backup processes using shell scripts and cron jobs for databases and configs
- Reduced deployment time by designing and managing GitHub Actions CI/CD pipelines for workflows
- Ensured high application availability by managing Node.js processes with PM2
- Optimized application delivery with NGINX as a reverse proxy with SSL termination and domain-based routing

EDUCATION

University of Sri Jayewardenepura

Bachelor of Computing Honours in Software Engineering

Colombo, Sri Lanka

May 2023 – Present

Jaffna Hindu College

Ordinary Levels & Advanced Levels

Jaffna, Sri Lanka

2012 – 2022

PROJECTS

Kubernetes Pod Failure Prediction (Final Year Research Project) | Python, Scikit-learn, XGBoost, SHAP, AKS

- Building a monitoring dashboard for Kubernetes with integrated ML framework to predict Kubernetes pod failures using multi-source telemetry — pod metrics, Kubernetes events, and node-level infrastructure data collected from Azure Kubernetes Service

Netflix Clone with DevSecOps | Jenkins, SonarQube, Trivy, Prometheus, Grafana, ArgoCD, AWS EKS | 🐙

- Built a DevSecOps CI/CD pipeline with Jenkins to automate build, test, dependency checks, security scans, Docker image creation, and deployment
- Integrated SonarQube, OWASP Dependency Check, and Trivy for code quality and vulnerability scanning
- Containerized the application with Docker and deployed it on AWS EKS for scalable, cloud-ready infrastructure
- Implemented ArgoCD for GitOps-based automated deployment and self-healing of Kubernetes resources
- Configured Prometheus and Grafana with Node Exporter to monitor system, Jenkins, and Kubernetes metrics

Microservices Voting App | Azure DevOps, Docker, AKS, ArgoCD, ACR | 🐙

- Built automated CI/CD pipelines in Azure DevOps to build, test, and push Docker images to ACR
- Deployed multi-service applications to AKS using Kubernetes manifests
- Implemented ArgoCD for GitOps-based continuous deployment and automated image updates
- Managed private registry authentication and cluster access for secure, scalable deployments

Terraform with GitLab CI/CD Pipeline | Terraform, AWS, GitLab CI/CD, S3, DynamoDB | 🐙

- Automated AWS infrastructure provisioning using Terraform integrated with GitLab CI/CD
- Configured secure remote state management with S3 bucket and DynamoDB for state locking
- Designed a 4-stage pipeline (Validate → Plan → Apply → Destroy) with manual approvals for Apply & Destroy to reflect industry best practices
- Developed modular Terraform code: VPC module (subnet + security group) and Web module (EC2 instance)
- Enhanced deployment reliability with backend validation and remote state consistency checks

TECHNICAL SKILLS

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Terraform, Ansible, GitHub Actions, GitLab CI/CD, Jenkins, ArgoCD

Monitoring & Security: Prometheus, Grafana, Trivy, SonarQube, OWASP Dependency Check

Languages: Python, Shell Scripting, Java, JavaScript

Web Development: MERN Stack, Next.js, REST APIs

Tools: Git, VS Code, Linux (Ubuntu), Windows
